

Ajouter et Soustraire Deux Fractions (G)

Nom: _____

Date: _____

Note: _____

Calculez chaque résultat.

1. $\frac{5}{3} + \frac{6}{18} = \text{---} + \text{---} = \text{---} = \text{---} =$

2. $\frac{13}{5} + \frac{22}{20} = \text{---} + \text{---} = \text{---} = \text{---} = \text{---}$

3. $\frac{19}{6} - \frac{1}{2} = \text{---} - \text{---} = \text{---} = \text{---} = \text{---}$

4. $\frac{39}{12} - \frac{5}{6} = \text{---} - \text{---} = \text{---} = \text{---}$

5. $\frac{22}{6} - \frac{7}{3} = \text{---} - \text{---} = \text{---} = \text{---} = \text{---}$

6. $\frac{10}{3} - \frac{13}{15} = \text{---} - \text{---} = \text{---} = \text{---}$

7. $\frac{41}{18} - \frac{3}{6} = \text{---} - \text{---} = \text{---} = \text{---} = \text{---}$

8. $\frac{30}{8} + \frac{5}{2} = \text{---} + \text{---} = \text{---} = \text{---} = \text{---}$

9. $\frac{7}{2} + \frac{4}{6} = \text{---} + \text{---} = \text{---} = \text{---}$

10. $\frac{33}{9} + \frac{7}{18} = \text{---} + \text{---} = \text{---} = \text{---}$

Ajouter et Soustraire Deux Fractions (G) Réponses

Nom: _____

Date: _____

Note: _____

Calculez chaque résultat.

$$1. \quad \frac{5}{3} + \frac{6}{18} = \frac{30}{18} + \frac{6}{18} = \frac{36}{18} = \frac{2}{1} = 2$$

$$2. \quad \frac{13}{5} + \frac{22}{20} = \frac{52}{20} + \frac{22}{20} = \frac{74}{20} = \frac{37}{10} = 3\frac{7}{10}$$

$$3. \quad \frac{19}{6} - \frac{1}{2} = \frac{19}{6} - \frac{3}{6} = \frac{16}{6} = \frac{8}{3} = 2\frac{2}{3}$$

$$4. \quad \frac{39}{12} - \frac{5}{6} = \frac{39}{12} - \frac{10}{12} = \frac{29}{12} = 2\frac{5}{12}$$

$$5. \quad \frac{22}{6} - \frac{7}{3} = \frac{22}{6} - \frac{14}{6} = \frac{8}{6} = \frac{4}{3} = 1\frac{1}{3}$$

$$6. \quad \frac{10}{3} - \frac{13}{15} = \frac{50}{15} - \frac{13}{15} = \frac{37}{15} = 2\frac{7}{15}$$

$$7. \quad \frac{41}{18} - \frac{3}{6} = \frac{41}{18} - \frac{9}{18} = \frac{32}{18} = \frac{16}{9} = 1\frac{7}{9}$$

$$8. \quad \frac{30}{8} + \frac{5}{2} = \frac{30}{8} + \frac{20}{8} = \frac{50}{8} = \frac{25}{4} = 6\frac{1}{4}$$

$$9. \quad \frac{7}{2} + \frac{4}{6} = \frac{21}{6} + \frac{4}{6} = \frac{25}{6} = 4\frac{1}{6}$$

$$10. \quad \frac{33}{9} + \frac{7}{18} = \frac{66}{18} + \frac{7}{18} = \frac{73}{18} = 4\frac{1}{18}$$
