

## Ajouter Deux Fractions Propres (C)

Nom: \_\_\_\_\_

Date: \_\_\_\_\_

Note: \_\_\_\_\_

Calculez chaque somme.

1.  $\frac{2}{5} + \frac{7}{20} =$

2.  $\frac{2}{5} + \frac{10}{20} =$

3.  $\frac{1}{6} + \frac{1}{2} =$

4.  $\frac{2}{4} + \frac{4}{20} =$

5.  $\frac{2}{4} + \frac{2}{16} =$

6.  $\frac{1}{5} + \frac{9}{15} =$

7.  $\frac{1}{2} + \frac{3}{10} =$

8.  $\frac{1}{2} + \frac{5}{14} =$

9.  $\frac{1}{2} + \frac{2}{20} =$

10.  $\frac{3}{6} + \frac{5}{18} =$

## Ajouter Deux Fractions Propres (C) Réponses

Nom: \_\_\_\_\_

Date: \_\_\_\_\_

Note: \_\_\_\_\_

Calculez chaque somme.

$$1. \frac{2}{5} + \frac{7}{20} = \frac{8}{20} + \frac{7}{20} = \frac{15}{20} = \frac{3}{4}$$

$$2. \frac{2}{5} + \frac{10}{20} = \frac{8}{20} + \frac{10}{20} = \frac{18}{20} = \frac{9}{10}$$

$$3. \frac{1}{6} + \frac{1}{2} = \frac{1}{6} + \frac{3}{6} = \frac{4}{6} = \frac{2}{3}$$

$$4. \frac{2}{4} + \frac{4}{20} = \frac{10}{20} + \frac{4}{20} = \frac{14}{20} = \frac{7}{10}$$

$$5. \frac{2}{4} + \frac{2}{16} = \frac{8}{16} + \frac{2}{16} = \frac{10}{16} = \frac{5}{8}$$

$$6. \frac{1}{5} + \frac{9}{15} = \frac{3}{15} + \frac{9}{15} = \frac{12}{15} = \frac{4}{5}$$

$$7. \frac{1}{2} + \frac{3}{10} = \frac{5}{10} + \frac{3}{10} = \frac{8}{10} = \frac{4}{5}$$

$$8. \frac{1}{2} + \frac{5}{14} = \frac{7}{14} + \frac{5}{14} = \frac{12}{14} = \frac{6}{7}$$

$$9. \frac{1}{2} + \frac{2}{20} = \frac{10}{20} + \frac{2}{20} = \frac{12}{20} = \frac{3}{5}$$

$$10. \frac{3}{6} + \frac{5}{18} = \frac{9}{18} + \frac{5}{18} = \frac{14}{18} = \frac{7}{9}$$
