

Ajouter Deux Fractions Propres (B)

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

1. $\frac{2}{3} + \frac{4}{6} =$

2. $\frac{3}{4} + \frac{8}{16} =$

3. $\frac{1}{2} + \frac{13}{14} =$

4. $\frac{4}{5} + \frac{6}{15} =$

5. $\frac{3}{6} + \frac{8}{12} =$

6. $\frac{6}{8} + \frac{6}{16} =$

7. $\frac{4}{5} + \frac{8}{10} =$

8. $\frac{2}{3} + \frac{10}{12} =$

9. $\frac{2}{3} + \frac{5}{6} =$

10. $\frac{5}{6} + \frac{2}{3} =$

Ajouter Deux Fractions Propres (B) Réponses

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

$$1. \quad \frac{2}{3} + \frac{4}{6} = \frac{4}{6} + \frac{4}{6} = \frac{8}{6} = \frac{4}{3} = 1\frac{1}{3}$$

$$2. \quad \frac{3}{4} + \frac{8}{16} = \frac{12}{16} + \frac{8}{16} = \frac{20}{16} = \frac{5}{4} = 1\frac{1}{4}$$

$$3. \quad \frac{1}{2} + \frac{13}{14} = \frac{7}{14} + \frac{13}{14} = \frac{20}{14} = \frac{10}{7} = 1\frac{3}{7}$$

$$4. \quad \frac{4}{5} + \frac{6}{15} = \frac{12}{15} + \frac{6}{15} = \frac{18}{15} = \frac{6}{5} = 1\frac{1}{5}$$

$$5. \quad \frac{3}{6} + \frac{8}{12} = \frac{6}{12} + \frac{8}{12} = \frac{14}{12} = \frac{7}{6} = 1\frac{1}{6}$$

$$6. \quad \frac{6}{8} + \frac{6}{16} = \frac{12}{16} + \frac{6}{16} = \frac{18}{16} = \frac{9}{8} = 1\frac{1}{8}$$

$$7. \quad \frac{4}{5} + \frac{8}{10} = \frac{8}{10} + \frac{8}{10} = \frac{16}{10} = \frac{8}{5} = 1\frac{3}{5}$$

$$8. \quad \frac{2}{3} + \frac{10}{12} = \frac{8}{12} + \frac{10}{12} = \frac{18}{12} = \frac{3}{2} = 1\frac{1}{2}$$

$$9. \quad \frac{2}{3} + \frac{5}{6} = \frac{4}{6} + \frac{5}{6} = \frac{9}{6} = \frac{3}{2} = 1\frac{1}{2}$$

$$10. \quad \frac{5}{6} + \frac{2}{3} = \frac{5}{6} + \frac{4}{6} = \frac{9}{6} = \frac{3}{2} = 1\frac{1}{2}$$
