

## Ajouter Deux Fractions Propres (C)

Nom: \_\_\_\_\_

Date: \_\_\_\_\_

Note: \_\_\_\_\_

Calculez chaque somme.

1.  $\frac{3}{4} + \frac{14}{16} =$

2.  $\frac{1}{2} + \frac{5}{6} =$

3.  $\frac{2}{3} + \frac{6}{9} =$

4.  $\frac{5}{7} + \frac{8}{14} =$

5.  $\frac{2}{6} + \frac{11}{12} =$

6.  $\frac{1}{3} + \frac{10}{12} =$

7.  $\frac{3}{6} + \frac{8}{12} =$

8.  $\frac{2}{5} + \frac{8}{10} =$

9.  $\frac{2}{3} + \frac{16}{18} =$

10.  $\frac{1}{2} + \frac{13}{14} =$

## Ajouter Deux Fractions Propres (C) Réponses

Nom: \_\_\_\_\_

Date: \_\_\_\_\_

Note: \_\_\_\_\_

Calculez chaque somme.

$$1. \quad \frac{3}{4} + \frac{14}{16} = \frac{12}{16} + \frac{14}{16} = \frac{26}{16} = \frac{13}{8} = 1\frac{5}{8}$$

$$2. \quad \frac{1}{2} + \frac{5}{6} = \frac{3}{6} + \frac{5}{6} = \frac{8}{6} = \frac{4}{3} = 1\frac{1}{3}$$

$$3. \quad \frac{2}{3} + \frac{6}{9} = \frac{6}{9} + \frac{6}{9} = \frac{12}{9} = \frac{4}{3} = 1\frac{1}{3}$$

$$4. \quad \frac{5}{7} + \frac{8}{14} = \frac{10}{14} + \frac{8}{14} = \frac{18}{14} = \frac{9}{7} = 1\frac{2}{7}$$

$$5. \quad \frac{2}{6} + \frac{11}{12} = \frac{4}{12} + \frac{11}{12} = \frac{15}{12} = \frac{5}{4} = 1\frac{1}{4}$$

$$6. \quad \frac{1}{3} + \frac{10}{12} = \frac{4}{12} + \frac{10}{12} = \frac{14}{12} = \frac{7}{6} = 1\frac{1}{6}$$

$$7. \quad \frac{3}{6} + \frac{8}{12} = \frac{6}{12} + \frac{8}{12} = \frac{14}{12} = \frac{7}{6} = 1\frac{1}{6}$$

$$8. \quad \frac{2}{5} + \frac{8}{10} = \frac{4}{10} + \frac{8}{10} = \frac{12}{10} = \frac{6}{5} = 1\frac{1}{5}$$

$$9. \quad \frac{2}{3} + \frac{16}{18} = \frac{12}{18} + \frac{16}{18} = \frac{28}{18} = \frac{14}{9} = 1\frac{5}{9}$$

$$10. \quad \frac{1}{2} + \frac{13}{14} = \frac{7}{14} + \frac{13}{14} = \frac{20}{14} = \frac{10}{7} = 1\frac{3}{7}$$
