

Ajouter Deux Fractions Propres (I)

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

1. $\frac{2}{3} + \frac{10}{12} =$

2. $\frac{3}{5} + \frac{11}{15} =$

3. $\frac{5}{6} + \frac{1}{2} =$

4. $\frac{4}{6} + \frac{8}{18} =$

5. $\frac{4}{7} + \frac{12}{14} =$

6. $\frac{8}{9} + \frac{10}{18} =$

7. $\frac{2}{4} + \frac{14}{16} =$

8. $\frac{2}{3} + \frac{8}{15} =$

9. $\frac{7}{9} + \frac{13}{18} =$

10. $\frac{6}{7} + \frac{4}{14} =$

Ajouter Deux Fractions Propres (I) Réponses

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

$$1. \quad \frac{2}{3} + \frac{10}{12} = \frac{8}{12} + \frac{10}{12} = \frac{18}{12} = \frac{3}{2} = 1\frac{1}{2}$$

$$2. \quad \frac{3}{5} + \frac{11}{15} = \frac{9}{15} + \frac{11}{15} = \frac{20}{15} = \frac{4}{3} = 1\frac{1}{3}$$

$$3. \quad \frac{5}{6} + \frac{1}{2} = \frac{5}{6} + \frac{3}{6} = \frac{8}{6} = \frac{4}{3} = 1\frac{1}{3}$$

$$4. \quad \frac{4}{6} + \frac{8}{18} = \frac{12}{18} + \frac{8}{18} = \frac{20}{18} = \frac{10}{9} = 1\frac{1}{9}$$

$$5. \quad \frac{4}{7} + \frac{12}{14} = \frac{8}{14} + \frac{12}{14} = \frac{20}{14} = \frac{10}{7} = 1\frac{3}{7}$$

$$6. \quad \frac{8}{9} + \frac{10}{18} = \frac{16}{18} + \frac{10}{18} = \frac{26}{18} = \frac{13}{9} = 1\frac{4}{9}$$

$$7. \quad \frac{2}{4} + \frac{14}{16} = \frac{8}{16} + \frac{14}{16} = \frac{22}{16} = \frac{11}{8} = 1\frac{3}{8}$$

$$8. \quad \frac{2}{3} + \frac{8}{15} = \frac{10}{15} + \frac{8}{15} = \frac{18}{15} = \frac{6}{5} = 1\frac{1}{5}$$

$$9. \quad \frac{7}{9} + \frac{13}{18} = \frac{14}{18} + \frac{13}{18} = \frac{27}{18} = \frac{3}{2} = 1\frac{1}{2}$$

$$10. \quad \frac{6}{7} + \frac{4}{14} = \frac{12}{14} + \frac{4}{14} = \frac{16}{14} = \frac{8}{7} = 1\frac{1}{7}$$
