

Ajouter Deux Fractions Propres (H)

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

1. $\frac{2}{6} + \frac{3}{7} =$

2. $\frac{2}{6} + \frac{9}{17} =$

3. $\frac{2}{4} + \frac{3}{17} =$

4. $\frac{1}{9} + \frac{2}{8} =$

5. $\frac{2}{6} + \frac{1}{7} =$

6. $\frac{1}{3} + \frac{4}{16} =$

7. $\frac{2}{4} + \frac{2}{11} =$

8. $\frac{4}{9} + \frac{4}{8} =$

9. $\frac{5}{7} + \frac{3}{18} =$

10. $\frac{2}{4} + \frac{3}{15} =$

Ajouter Deux Fractions Propres (H) Réponses

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

$$1. \quad \frac{2}{6} + \frac{3}{7} = \frac{14}{42} + \frac{18}{42} = \frac{32}{42} = \frac{16}{21}$$

$$2. \quad \frac{2}{6} + \frac{9}{17} = \frac{34}{102} + \frac{54}{102} = \frac{88}{102} = \frac{44}{51}$$

$$3. \quad \frac{2}{4} + \frac{3}{17} = \frac{34}{68} + \frac{12}{68} = \frac{46}{68} = \frac{23}{34}$$

$$4. \quad \frac{1}{9} + \frac{2}{8} = \frac{8}{72} + \frac{18}{72} = \frac{26}{72} = \frac{13}{36}$$

$$5. \quad \frac{2}{6} + \frac{1}{7} = \frac{14}{42} + \frac{6}{42} = \frac{20}{42} = \frac{10}{21}$$

$$6. \quad \frac{1}{3} + \frac{4}{16} = \frac{16}{48} + \frac{12}{48} = \frac{28}{48} = \frac{7}{12}$$

$$7. \quad \frac{2}{4} + \frac{2}{11} = \frac{22}{44} + \frac{8}{44} = \frac{30}{44} = \frac{15}{22}$$

$$8. \quad \frac{4}{9} + \frac{4}{8} = \frac{32}{72} + \frac{36}{72} = \frac{68}{72} = \frac{17}{18}$$

$$9. \quad \frac{5}{7} + \frac{3}{18} = \frac{90}{126} + \frac{21}{126} = \frac{111}{126} = \frac{37}{42}$$

$$10. \quad \frac{2}{4} + \frac{3}{15} = \frac{30}{60} + \frac{12}{60} = \frac{42}{60} = \frac{7}{10}$$
