

Ajouter Deux Fractions Propres (I)

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

1. $\frac{2}{6} + \frac{7}{19} =$

2. $\frac{2}{5} + \frac{2}{4} =$

3. $\frac{1}{7} + \frac{4}{6} =$

4. $\frac{6}{7} + \frac{2}{16} =$

5. $\frac{4}{6} + \frac{3}{19} =$

6. $\frac{6}{9} + \frac{1}{4} =$

7. $\frac{1}{3} + \frac{4}{8} =$

8. $\frac{2}{8} + \frac{8}{17} =$

9. $\frac{1}{5} + \frac{6}{16} =$

10. $\frac{2}{4} + \frac{2}{15} =$

Ajouter Deux Fractions Propres (I) Réponses

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

$$1. \frac{2}{6} + \frac{7}{19} = \frac{38}{114} + \frac{42}{114} = \frac{80}{114} = \frac{40}{57}$$

$$2. \frac{2}{5} + \frac{2}{4} = \frac{8}{20} + \frac{10}{20} = \frac{18}{20} = \frac{9}{10}$$

$$3. \frac{1}{7} + \frac{4}{6} = \frac{6}{42} + \frac{28}{42} = \frac{34}{42} = \frac{17}{21}$$

$$4. \frac{6}{7} + \frac{2}{16} = \frac{96}{112} + \frac{14}{112} = \frac{110}{112} = \frac{55}{56}$$

$$5. \frac{4}{6} + \frac{3}{19} = \frac{76}{114} + \frac{18}{114} = \frac{94}{114} = \frac{47}{57}$$

$$6. \frac{6}{9} + \frac{1}{4} = \frac{24}{36} + \frac{9}{36} = \frac{33}{36} = \frac{11}{12}$$

$$7. \frac{1}{3} + \frac{4}{8} = \frac{8}{24} + \frac{12}{24} = \frac{20}{24} = \frac{5}{6}$$

$$8. \frac{2}{8} + \frac{8}{17} = \frac{34}{136} + \frac{64}{136} = \frac{98}{136} = \frac{49}{68}$$

$$9. \frac{1}{5} + \frac{6}{16} = \frac{16}{80} + \frac{30}{80} = \frac{46}{80} = \frac{23}{40}$$

$$10. \frac{2}{4} + \frac{2}{15} = \frac{30}{60} + \frac{8}{60} = \frac{38}{60} = \frac{19}{30}$$
