

Ajouter Deux Fractions Propres (G)

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

1. $\frac{2}{4} + \frac{6}{7} =$

2. $\frac{5}{9} + \frac{4}{8} =$

3. $\frac{1}{3} + \frac{15}{20} =$

4. $\frac{5}{7} + \frac{3}{9} =$

5. $\frac{6}{8} + \frac{4}{15} =$

6. $\frac{3}{4} + \frac{6}{9} =$

7. $\frac{6}{9} + \frac{3}{7} =$

8. $\frac{3}{9} + \frac{6}{7} =$

9. $\frac{6}{7} + \frac{9}{12} =$

10. $\frac{3}{4} + \frac{3}{9} =$

Ajouter Deux Fractions Propres (G) Réponses

Nom: _____

Date: _____

Note: _____

Calculez chaque somme.

$$1. \quad \frac{2}{4} + \frac{6}{7} = \frac{14}{28} + \frac{24}{28} = \frac{38}{28} = \frac{19}{14} = 1\frac{5}{14}$$

$$2. \quad \frac{5}{9} + \frac{4}{8} = \frac{40}{72} + \frac{36}{72} = \frac{76}{72} = \frac{19}{18} = 1\frac{1}{18}$$

$$3. \quad \frac{1}{3} + \frac{15}{20} = \frac{20}{60} + \frac{45}{60} = \frac{65}{60} = \frac{13}{12} = 1\frac{1}{12}$$

$$4. \quad \frac{5}{7} + \frac{3}{9} = \frac{45}{63} + \frac{21}{63} = \frac{66}{63} = \frac{22}{21} = 1\frac{1}{21}$$

$$5. \quad \frac{6}{8} + \frac{4}{15} = \frac{90}{120} + \frac{32}{120} = \frac{122}{120} = \frac{61}{60} = 1\frac{1}{60}$$

$$6. \quad \frac{3}{4} + \frac{6}{9} = \frac{27}{36} + \frac{24}{36} = \frac{51}{36} = \frac{17}{12} = 1\frac{5}{12}$$

$$7. \quad \frac{6}{9} + \frac{3}{7} = \frac{42}{63} + \frac{27}{63} = \frac{69}{63} = \frac{23}{21} = 1\frac{2}{21}$$

$$8. \quad \frac{3}{9} + \frac{6}{7} = \frac{21}{63} + \frac{54}{63} = \frac{75}{63} = \frac{25}{21} = 1\frac{4}{21}$$

$$9. \quad \frac{6}{7} + \frac{9}{12} = \frac{72}{84} + \frac{63}{84} = \frac{135}{84} = \frac{45}{28} = 1\frac{17}{28}$$

$$10. \quad \frac{3}{4} + \frac{3}{9} = \frac{27}{36} + \frac{12}{36} = \frac{39}{36} = \frac{13}{12} = 1\frac{1}{12}$$
