

## Ajouter Deux Fractions Propres (A)

Nom: \_\_\_\_\_

Date: \_\_\_\_\_

Note: \_\_\_\_\_

Calculez chaque somme.

1.  $\frac{2}{8} + \frac{16}{19} =$

2.  $\frac{4}{6} + \frac{13}{17} =$

3.  $\frac{7}{9} + \frac{1}{2} =$

4.  $\frac{2}{3} + \frac{1}{2} =$

5.  $\frac{4}{5} + \frac{14}{17} =$

6.  $\frac{1}{8} + \frac{8}{9} =$

7.  $\frac{3}{5} + \frac{8}{14} =$

8.  $\frac{4}{6} + \frac{12}{13} =$

9.  $\frac{6}{9} + \frac{17}{19} =$

10.  $\frac{5}{6} + \frac{8}{19} =$

## Ajouter Deux Fractions Propres (A) Réponses

Nom: \_\_\_\_\_

Date: \_\_\_\_\_

Note: \_\_\_\_\_

Calculez chaque somme.

$$1. \quad \frac{2}{8} + \frac{16}{19} = \frac{38}{152} + \frac{128}{152} = \frac{166}{152} = \frac{83}{76} = 1\frac{7}{76}$$

$$2. \quad \frac{4}{6} + \frac{13}{17} = \frac{68}{102} + \frac{78}{102} = \frac{146}{102} = \frac{73}{51} = 1\frac{22}{51}$$

$$3. \quad \frac{7}{9} + \frac{1}{2} = \frac{14}{18} + \frac{9}{18} = \frac{23}{18} = 1\frac{5}{18}$$

$$4. \quad \frac{2}{3} + \frac{1}{2} = \frac{4}{6} + \frac{3}{6} = \frac{7}{6} = 1\frac{1}{6}$$

$$5. \quad \frac{4}{5} + \frac{14}{17} = \frac{68}{85} + \frac{70}{85} = \frac{138}{85} = 1\frac{53}{85}$$

$$6. \quad \frac{1}{8} + \frac{8}{9} = \frac{9}{72} + \frac{64}{72} = \frac{73}{72} = 1\frac{1}{72}$$

$$7. \quad \frac{3}{5} + \frac{8}{14} = \frac{42}{70} + \frac{40}{70} = \frac{82}{70} = \frac{41}{35} = 1\frac{6}{35}$$

$$8. \quad \frac{4}{6} + \frac{12}{13} = \frac{52}{78} + \frac{72}{78} = \frac{124}{78} = \frac{62}{39} = 1\frac{23}{39}$$

$$9. \quad \frac{6}{9} + \frac{17}{19} = \frac{114}{171} + \frac{153}{171} = \frac{267}{171} = \frac{89}{57} = 1\frac{32}{57}$$

$$10. \quad \frac{5}{6} + \frac{8}{19} = \frac{95}{114} + \frac{48}{114} = \frac{143}{114} = 1\frac{29}{114}$$
